7. Metalyse TENACITY trial (for late window indication)— China consideration for time window	Leo Bao	11:05	30 min	To limit the impact on global and mitigate local CTA risk, MAP suggests initially proposing scenario 2 to the global team (Submit global CTP with a time window limit of 24h for China as a specific IC/EC criterion,	Metalyse Evidence team	June 2025

		and with key secondary objective within 24h). Scenario 3 will be used as the back-up option (Submit global CTP with a time window limit of 24h for China as a specific IC/EC criterion and with a pre-specified subgroup for 24h). To explore the possibility of expanding the sample size in China. Highlight the DMC setup in the trial for safety monitoring in the reply to CDE to address their concerns.		
General		“China KEE” Project Identify the potential opportunities of China KEE joining global steering committee and prepare the candidate list with profiles for the following discussions.	TAHs	Jun 13th 2025
Close	11:35
